CARE OF THE GARMENTS

In FreeWear.org we care for the quality of our garments to be resistant to wear. It is very important to follow these rules to extend their maximum life and not to harm the resistance of the printing. The duration of the garments and drawings depends heavily on their perfect care (washing, drying and ironing). The printing techniques used are textile screen printing, textile vinyl or textile sublimation.

WASHING:
It is advisable to wash the garment before using it for the first time. Hand wash or machine wash, but always cold (never more than 30° C).
Always wash inside out so that the drawing does not touch the drum of the washing machine. Do not overload the washing machine.
Do not use softeners, bleach, stain removers or abrasives. Never use dry cleaning.

DRYING:
Never dry the garment with a dryer machine, it may damage the drawing.
Always hang upside down and with uniform exposure to light. Do not hang the garment to direct sunlight (it damages the intensity of the colors).
Do not squeeze or stretch in braid the clothes to dry faster.
Never dry clothes on heaters or radiators.
Hang garments immediately after washing, they would be easier to iron.

IRONING:
Never use the iron directly on the printed part: protect it always with an intermediate cloth or iron with the garment upside down.
Iron at low temperature (maximum 110° C).
Keep the iron and ironing board clean.

Enjoy it. Thank you very much :)
